SUMMARY

B.Tech Computer Engineering undergraduate at Parul University (expected May 2027) with project experience in software design, development, and testing of web applications. Proficient in Java, JavaScript, and Python; experienced building front-end and back-end systems using React.js and Node.js. Developed and maintained full-stack web applications integrating Artificial Intelligence (AI) and Machine Learning (ML) features via external Application Programming Interfaces (APIs). Familiar with Generative AI (Gen AI) tools, prompt engineering, and integrating AI-powered APIs into web applications. Experienced collaborating effectively in agile, cross-functional team environments; demonstrates written and verbal communication skills through technical documentation and stakeholder presentations.

SKILLS

Programming Languages: Java, JavaScript, Python, SQL, C#

Web Development: React.js, Node.js, Express.js, MERN Stack, RESTful API Design, Front-End Development, Back-End Development, Full-Stack Web Development, Web Technologies

AI/ML and Generative AI: Artificial Intelligence (AI), Machine Learning (ML), Generative AI (Gen AI), Prompt Engineering, AI-Powered API Integration, Google Cloud Vision API, AWS AI Tooling

Testing and Debugging: Postman, End-to-End Testing, Feature Implementation, API Testing, Bug Identification and Resolution

Databases: MySQL, MongoDB, SQL Query Optimization, Relational Schema Design

Tools and Methodologies: Git, GitHub, VS Code, Agile/Scrum, CI/CD, JSON Web Token (JWT) Authentication, ETL Pipelines, Figma

WORK EXPERIENCE

Software Developer (Project) | CivicEye - AI-Powered Issue Classification and Reporting System | Jun 2025 - Present

- Engineered an end-to-end full-stack web application integrating AI-powered image classification via Google Cloud Vision API, processing 500+ issue records across 5+ city zones and reducing manual data entry by 70%.
- Integrated an automated Extract Transform Load (ETL) data pipeline into MySQL with Machine Learning (ML)-based routing logic to assign cases automatically, cutting average case assignment time by an estimated 60%.
- Delivered a real-time analytics dashboard tracking complaint volume, resolution Key Performance Indicators (KPIs), and trend patterns using Node.js and Express.js back-end services with a React.js front-end.
- Authored technical documentation covering system architecture, API routes, AI integration workflows, and deployment procedures; supported team onboarding across 3 functional areas.

Software Developer (Project) | GearGuard - Asset Management and Equipment Health Monitoring System | Feb 2025 - Present

- Deployed a RESTful API (Node.js, Express.js) with department, status, and date filters supporting full Create Read Update Delete (CRUD) operations across 200+ assets, reducing estimated unplanned downtime by 30%.
- Configured a Key Performance Indicator (KPI) visualization dashboard with maintenance frequency tracking and categorical decision logic, identifying the top 15% high-maintenance assets across 4 asset categories.
- Automated maintenance scheduling and repair tracking workflows using a normalized MySQL database (Third Normal Form) covering maintenance histories and service records for 200+ assets.
- Produced complete technical documentation including schema design, API endpoint references, and deployment procedures to support long-term maintainability and team collaboration.

Full-Stack Developer (Project) | Developer Collaboration Board | Nov 2024 - Feb 2025

- Architected a full-stack MERN (MongoDB, Express.js, React.js, Node.js) web application with JSON Web Token (JWT) authentication and role-based access control covering 3 user permission levels.
- Structured RESTful API routes by resource type for independent testability; optimized MongoDB schema with field indexing on skills and project tags, achieving consistent sub-100ms query response times.
- Applied agile development practices across the full build cycle; documented all API endpoints and data models to support feature implementation, testing, and debugging by cross-functional contributors.

Team Member | Odoo x Adani University Hackathon | Feb 2025

- Led scoping and delivery of a data-driven web application within a 4-member cross-functional team under a 24-hour time constraint; presented findings to industry evaluators and received recognition for technical execution.

Team Member | Odoo x Parul University Hackathon | May 2026

- Launched a full-stack web application (Node.js, Express.js, MongoDB, JWT) with an analytics dashboard, budget tracking module, and real-time data updates within a time-constrained sprint.

EDUCATION

B.Tech in Computer Engineering (Expected May 2027)

PIET, Parul University, Vadodara, Gujarat, India

Relevant Coursework: Data Structures and Algorithms, Database Management Systems, Web Technologies, Software Engineering, Cloud Computing, Operating Systems

CERTIFICATIONS

- Generative Artificial Intelligence (Gen AI) - Parul University | 2026
- Cloud Computing and Artificial Intelligence (AI) with Amazon Web Services (AWS) - Cloud Infrastructure, Compute Services, and AI Tooling | 2025
- Foundation Course on Green Skills and Artificial Intelligence (AI) - Parul University | 2025
- Design Smarter: UX Masterclass with Figma - Wireframing, Prototyping, and User Flow Design | 2024
